

Feed your plants what they've been missing.

### High Quality Results

All of our products are formulated with high-quality inputs to provide you with clean & stable nutrients. We've left out unnecessary inputs that result in poor flavor and excess salt buildup.

### Higher Yields

With our formula, Drip Hydro will provide your plants with the exact nutrients they need at the moments they need them; resulting in maximum genetic potential and a higher gram per square foot ratio.

### Low Overhead

Our cost-per-mixed-gallon is the most competitive in the industry.

### Irrigation Friendly

Clean nutrients that never leave buildup. Drip Hydro is suitable for all growing mediums and hydroponic systems.

5-0-2

### Base A

- Our higher concentration of nitrogen plays a key role in your plant's coloring and chlorophyll production, making it an important factor in leaf development while the stronger concentration of potassium contributes to the overall health and vigor of your plants.
- Contains Magnesium, Copper, Iron, Manganese, and Zinc to ensure that your plants receive the proper nutrition throughout their entire life cycles.
- The iron in Base A is derived from two superior chelates: Iron EDDHA, an environmentally friendly form of Iron, and Iron DTPA. Both sources allow for use in a wider range of pH's and will remain in chelated form in your watering solution.

0-4-4

### Base B

- Our higher concentration of phosphorous plays a key role in the growth of roots, flower sites, blooming, fruiting, energy transportation in the cell, the building of the cell wall itself, as well many other fundamental plant processes. The stronger concentration of potassium contributes to the overall health and vigor of your plants.
- Contains Boron, Iron, Manganese, and Zinc to ensure that your plants receive the proper nutrition throughout their entire life cycles.
- The phosphorous and potassium in Base B are derived from two sources: Monopotassium Phosphate, and Dipotassium Phosphate, a more expensive, hard-to-source compound.

0-10-10

### Flex

- Rich in highly bio-available Phosphorus and Potassium, Flex provides your plants with the additional phosphorous and potassium that they require for increasing your plants complex essential oil, sugar, and terpene production.
- Contains chelated Manganese and chelated Zinc.
- Equal amount of phosphorous to potassium allows for less stretching, and tighter internodal spacing.
- Stimulates your plants' growth and vitality to allow quicker and more abundant budding, flowering, and blooming to deliver denser, harder, and heavier fruit and flowers, resulting in increased yields. An all-in-one hardener and bulker.

# 2-0-0

## CaMg

- With a Calcium to Magnesium ratio of 4:1, CaMg is more concentrated than most other cal-mags on the market.
- Contains additional Nitrogen and Iron.
- Due to the immobility of calcium in growing mediums and in plant tissues, a continuous supply must be present for your plants to access and uptake it. Without magnesium, chlorophyll cannot capture the light energy needed for photosynthesis.
- Even though there is Calcium and Magnesium in our Base A & B formulas, certain plant strains, growing mediums, and environments may require supplementation of a higher concentration of these micro-nutrients.

# HOCl

## Flow

- Clean, simple, and effective method for keeping your irrigation running smoothly.
- The active ingredient in Flow is Hypochlorous acid. This non-toxic, plant-safe solution is proven to break down and prevent buildup and scale in irrigation systems and reservoirs. Flow will help keep your root zone clean for the lifetime of your plants.
- Designed to be used once a week, limiting the amount needed to prevent buildup allows for nose, taste, and flavor profiles to not be jeopardized, resulting in a clean irrigation system and a quality end product.
